AEROBIC WALL

THE STRENGTH OF QUALITY,
THE VALUE OF DESIGN,
THE CREATIVITY OF INNOVATION

Once again, FIT INTERIORS amazes us with its capacity to resolve situations which no one had previously faced, demonstrating its strong focus on the problems of the sector. It has, in fact, presented its first preview of the innovative furnishing system, AEROBIC WALL, thereby resolving - by means of another winning idea - the age-old problem of order and cleaning in rooms that are reserved to group activities. AEROBIC WALL allows each small tool to be ideally positioned without causing overall disorder. Specific allocations are, in fact, set aside for step machines, bosu balls, free weights, mats, bars and weight bar racks, bench presses, weight disks and weight racks. Elastics, ankle/wrist bands and similar equipment are ideally allocated within the spacious drawers that are mounted upon robust wheels that can be rolled across the floor. As is traditional with FIT INTERIORS, AEROBIC WALL combines great functionality with a maximum level of aesthetics and quality. As a result, even group-activity rooms finally acquire an innovative and orderly appearance.

The modular nature of the various models allows them to be positioned along walls and ensures the optimal allocation of all equipment which is used for the various courses. The extremely trendy colours that are currently available complete the functional elegance of AEROBIC WALL.
